

CSCI 136:  
Data Structures  
and  
Advanced Programming  
Lecture 6  
Vector API

Instructor: Dan Barowy  
**Williams**

## Outline

1. Quiz
2. Vector
3. Lab tips

## Quiz

Did you run into **obstacles** on Lab 1?

Did you run into **obstacles** on Lab 1?

Did these obstacles **feel** like **somebody else's fault**?

Study tip #2: **reflection**

Suppose you had a **time machine** and could time-travel back to last Monday.

What would you **tell yourself to do differently**?

Take a moment and write (**privately**).

Study tip #2: **reflection**

Unforeseen obstacles are **common**.

Study tip #2: **reflection**

Think about how your advice will **help with future labs**.

What is a Vector?

What's wrong with this program?

```
class NotAVector {  
    public static void main(String[] args) {  
        int[] a = new int[10];  
        for (int i = 0; i < 11; i++) {  
            a[i] = i;  
        }  
        for (int i = 0; i < a.length; i++) {  
            System.out.println(a[i]);  
        }  
    }  
}
```

Oops

```
Exception in thread "main"  
java.lang.ArrayIndexOutOfBoundsException: 10  
    at NotAVector.main(NotAVector.java:7)
```

## Vector solves this problem

```
import structure5.*;

class VectorDemo {
    public static void main(String[] args) {
        Vector<Integer> v = new Vector<Integer>();
        for (int i = 0; i < 10000; i++) {
            v.add(i);
        }
        for (int elem : v) {
            System.out.println(elem);
        }
    }
}
```

Vector **grows** when more space is needed.

**Vector** is a generic class

```
Vector<T> v = new Vector<T>();
```

## Generic types

A **generic type** is a placeholder (a **type variable**) for a type **to be specified later**. Generic types permit the creation of common algorithms and data structures (e.g., a generic sequence), thus **reducing code duplication**. Generics allow for **data type abstraction**.

**Vector** is a generic class;  
it works with **any type**.★

Generic class

↓  
**Vector<T>** v = new **Vector<T>**();  
↑

Type parameter (fill in with the type you want)

(**Vector** documentation)

How does Vector work?

(code)

get

(code)

set

(code)

indexOf

(code)

add  
(code)

many more methods!

Lab 2 tips

Biased sampling

What does this program do?

```
Random r = new Random();  
int num = r.nextInt(10);
```

Chooses a value between 0 and 9 inclusive  
with **uniformly random** probability.

I.e., all values are **equally likely**.

What if we want to specify  
the likelihood?

| letter | likelihood |
|--------|------------|
| 'a'    | 1          |
| 'b'    | 6          |
| 'c'    | 3          |

A naïve algorithm

|     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 'a' | 'b' | 'b' | 'b' | 'b' | 'b' | 'b' | 'c' | 'c' | 'c' |
| 0   | 1   | 2   | 3   | 4   | 5   | 6   | 7   | 8   | 9   |

```
char[] arr = new char[10];  
// ... code to fill array ...  
Random r = new Random();  
int num = r.nextInt(10);  
char c = arr[num];
```

A better algorithm

| letter | likelihood |
|--------|------------|
| 'a'    | 1          |
| 'b'    | 6          |
| 'c'    | 3          |

1. Compute the **sum of the likelihoods** (here: **10**).
2. Choose a number **n** between **0 ... sum** (exclusive) uniformly randomly.
3. For each letter, subtract the **likelihood** from **n**.
4. When **n becomes negative**, you've "found" the right letter.

## Try it at home!

Notice that you get the **same answer** had you used the naïve method.

|     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 'a' | 'b' | 'b' | 'b' | 'b' | 'b' | 'b' | 'c' | 'c' | 'c' |
| 0   | 1   | 2   | 3   | 4   | 5   | 6   | 7   | 8   | 9   |

1. Compute the **sum of the likelihoods** (here: **10**).
2. Choose a number **n** between **0 ... sum** (exclusive) uniformly randomly.
3. For each letter, subtract the **likelihood** from **n**.
4. When **n becomes negative**, you've "found" the right letter.

## Recap & Next Week

Today we learned:

- Vectors
- Hand-wavy worst-case time analysis

Next class:

- Recursion
