Resubmissions

You have 2 resubmissions at your disposal. You may resubmit the midterm exam and any lab except the final lab. You may not resubmit the final exam. A high-quality resubmission recoups up to 50% of the missing points.

Resubmissions must be turned in before the end of the final exam reading period.

We really do read every one of these. Please take your time and do your work carefully and neatly so that we can understand what you mean. We want to give you back the maximum amount of points, so make it easy for us to do so.

Resubmission must include:

1. the original solution,

2. the updated solution, and

3. a document explaining your mistakes.

This document must be typed or it will not be accepted.

Goal

Critically, your explanation document must describe, in plain English, *what* you did wrong, *why* you made the mistake, and *how* your new solution fixes the problem. If you learned something from your mistake, tell us. In short, the goal of this exercise is to give you a second chance to demonstrate that you learned a concept.

How to Resubmit

For code resubmissions:

You should reorganize your code repository so that your original submission is in a new directory called `original` and your reworked solution and explanation document are in a directory called `resubmission`.

When you are done, commit your files to your repository with a commit message titled "`Resubmission`", and then send your instructor an email (`dwb1@williams.edu` or `srm2@williams.edu`) to let one of us know that your resubmission is ready to review.

For a midterm resubmission:

Your resubmission should be *on paper*. You should give us:

1. your original exam, and

2. a document explaining your mistakes that includes reworked solutions.

We recommend using a *paper clip* to bind the two documents together so that we can pull them apart and compare them side-by-side.
