

Resubmissions

You have 2 resubmissions to use as you wish. This policy includes the labs and the midterm exam, but not the final project. A resubmission allows you to earn back up to 50% of your missing points.

Resubmissions must be given to me by Sunday, December 17.

I really do read every one of these. Please take your time and do your work carefully and neatly so that I can understand what you mean. I want to give you back the maximum amount of points, so make it easy for me to do so.

Resubmission must include:

1. the original solution,
2. the updated solution, and
3. a document explaining your mistakes.

Explanation Document

Critically, your explanation document must describe, in plain English, *what* you did wrong, *why* you made the mistake, and *how* your new solution fixes the problem. In short, you need to tell me what you learned from your mistake.

This document must be typed or it will not be accepted.

How to Resubmit

For code resubmissions:

You should create a new branch in your code repository called `resubmission` that includes your reworked solution and explanation document. Please leave the original `main` branch unmodified so that I can compare your two solutions.

When you are done, commit your files to your repository, push using `git push --set-upstream origin resubmission`, then fill out the form located at <https://forms.gle/k3Le5aSRUznEMHy47>. If you do not fill out the form, I will not know that you resubmitted something, and you will receive no credit. Be sure to fill out the form.

For a midterm resubmission:

Your resubmission should be *on paper*. You must give me:

1. your original exam, and
2. a document explaining your mistakes that includes reworked solutions.

I recommend using a *paper clip* to bind the two documents together so that I can pull them apart and compare them side-by-side. As with code resubmissions, please fill out the form at <https://forms.gle/k3Le5aSRUznEMHy47> so that I know you submitted something.

Remember, I will not accept handwritten resubmissions.
