## Resubmissions

---

You have 3 resubmissions at your disposal. You may resubmit the midterm exam and any lab except the final lab, but not the final project. A high-quality resubmission recoups up to 50% of the missing points.

Resubmissions must be given to me before the end of the final exam reading period.

I really do read every one of these. Please take your time and do your work carefully and neatly so that I can understand what you mean. I want to give you back the maximum amount of points, so make it easy for me to do so.

Resubmission must include:

1. the original solution,
2. the updated solution, and
3. a document explaining your mistakes.

**This document must be typed or it will not be accepted.**

---

## Goal

---

Critically, your explanation document must describe, in plain English, what you did wrong, why you made the mistake, and how your new solution fixes the problem. If you learned something from your mistake, tell me. In short, the goal of this exercise is to give you a second chance to demonstrate that you learned a concept.

---

## How to Resubmit

---

For code resubmissions:

You should create a new branch in your code repository called `resubmission`. Put all of the files you intend to resubmit in this branch.

When you are done, commit and push your `resubmission` branch and then fill out the form at the following URL: <https://forms.gle/mbkDBFXHVMdemaun7>.

For a midterm resubmission:

Your resubmission should be on paper. You should give me:

1. your original exam, and
2. a typed document explaining your mistakes that includes reworked solutions.

I recommend using a paper clip to bind the two documents together so that I can pull them apart and compare them side-by-side. Please put this resubmission either directly into my hands or into my department mailbox. If you put the resubmission into my department mailbox, please send me an email to let me know that you put it there.
