Resubmissions

You have 3 resubmissions to use as you wish. This policy includes the first nine labs and the midterm exam, but not the final lab or final project. A resubmission allows you to earn back up to 50% of your missing points.

Resubmissions must be given to me before the end of the final exam reading period.

By the way, I really do read every one of these. Please take your time and do your work carefully and neatly so that I can understand what you mean. I want to give you back the maximum amount of points, so make it easy for me to do so.

Resubmission must include:

1. the original solution,

2. the updated solution, and

3. a document explaining your mistakes.

Explanation Document

Critically, your explanation document must describe, in plain English, <u>what</u> you did wrong, <u>why</u> you made the mistake, and <u>how</u> your new solution fixes the problem. In short, you need to tell me what you learned from your mistake.

This document must be typed or it will not be accepted.

How to Resubmit

<u>For code resubmissions:</u>

You should reorganize your code repository so that your original submission is in a new directory called `original` and your reworked solution and explanation document are in a directory called `resubmission`.

When you are done, commit your files to your repository, open an issue titled "`Resubmission`" that references the commit, and then assign me (`dbarowy`) to the issue. Send me an email (`dbarowy@cs.williams.edu`) to let me know that your resubmission is ready for me to review.

<u>For a midterm resubmission:</u>

Your resubmission should be <u>on paper</u>. You should give me:

1. your original exam, and

2. a document explaining your mistakes that includes reworked solutions.

I recommend using a <u>paper clip</u> to bind the two documents together so that I can pull them apart and compare them side-by-side.

Remember, I will not accept handwritten resubmissions.
